科 目	汽車工 業英文	命題 教師	李峯松	審題 教師	詹勳從	年 級	三	科 別	汽車	姓名					

英翻中、每題10分，共100分

1. So when you turn the key, the starter will engage, the engine will spin, it'll turn over, but it just won't start. And this is a situation that most people who drive will encounter at least once.

2. Now, my neighbor used to daily drive this car, he'd go to work every single day in it, and it was very reliable.

3. He tried to turn it on multiple times, it wouldn't start, so he got it towed to his local mechanic. Now his mechanic put in a brand new computer, a brand new coil, and a brand new distributor, and none of these things fixed the car.

4. This cost my neighbor a ton of money! And he didn't want to pump any more money into this car, so he towed it home, got a new car, and parked this one indefinitely.

5. So after sitting for four years in his driveway, the owner wanted to get rid of it. And instead of junking it, the owner gave it to me as kind of like a challenge.

6. He sees me fixing cars in my driveway all the time and he wants to see if I could get it started because his mechanic couldn't.

7. So, in order to figure out what the problem is, you want to break it down into the five things an engine needs to run.

8. The first three main things are fuel, air, and spark, but we also need compression and correct timing.

9. The air and the fuel have to mix together in the cylinder, and then the spark has to ignite that and create an explosion.

10. Your engine needs compression so that piston can be forced down from that explosion and all that has to happen at the exact correct time in order for the engine to start and stay running.
