#### IV. 閱讀選擇 10% (每題 2 分)

Imperfect food refers to fruits and vegetables that are oddly shaped, discolored, or slightly damaged but still safe and nutritious to eat. These foods are often discarded by supermarkets because they don't meet cosmetic standards, even though they taste the same as "perfect" produce. However, buying imperfect food can reduce food waste, save money, and support sustainability. Many organizations and companies are now selling imperfect produce to raise awareness about food waste. By choosing to buy these products, consumers can help protect the environment by reducing the resources needed for food production, such as water and energy. In addition, embracing imperfect food encourages people to value nutrition over appearance and rethink their shopping habits.
