Part III. Fill in the blanks 30%

(A) mansion (B) trauma (C) trigger (D) fraud (E) ecosystem (F) conservation (G) thrived (H) crucial (I) gloomy (J) extinct

Environmental scientists have raised concerns about the future of our planet's natural resources. Many species that once (1) in vibrant rainforests now face a(n) (2) landscape due to excessive deforestation. The loss of such habitats can (3) a chain reaction affecting the entire (4) and potentially causing many species to become (5). Last year, a wealthy businessman was convicted of environmental (6) after claiming his company practiced sustainable logging while actually destroying protected areas. He used the profits to build a lavish (7) while the local wildlife suffered. Many environmentalists have experienced psychological (8) witnessing such destruction firsthand. Experts agree that (9) efforts are (10) if we want to ensure that endangered plant and animal species can be protected and recover.

Part IV. Reading Comprehension 25%

Memory is a fascinating cognitive ability that has puzzled scientists for decades. The human brain processes countless sensory inputs daily, yet only a small fraction of these experiences become long-term memories. Research shows that strong emotional reactions can trigger the formation of vivid memories, which explains why people often remember exactly where they were during significant historical events or personal tragedies.

Psychologists have discovered that memory is not merely a passive recording system. Instead, it is an active process through which we continuously edit and reconstruct past experiences. This is why eyewitness testimony can be notoriously unreliable in court cases. Even with no intention to deceive, witnesses may unconsciously alter their recollection of events.

For some individuals who have experienced psychological trauma, memories can become problematic. Post-traumatic stress disorder (PTSD) often involves intrusive memories that repeatedly surface, causing significant distress. Therapists who work with PTSD patients employ various techniques to help them process these memories in a healthier way, allowing them to acknowledge past experiences without being overwhelmed by them.

Most people have a photographic memory to some degree, especially during childhood. However, true eidetic memory—the ability to recall images, sounds, or objects with extreme precision after only brief exposure—is exceedingly rare in adults. Most who claim to have perfect recall are actually using advanced memory techniques rather than possessing an innate photographic ability.

Memory is crucial to our sense of identity. Without our memories, we would struggle to understand who we are or maintain relationships. This is why conditions that affect memory, such as Alzheimer's disease, can be so devastating not only for patients but also for their loved ones. The person may physically remain, but as memories fade, essential aspects of their personality and life history become extinct.

Fortunately, research into memory enhancement continues to advance. Some studies suggest that certain lifestyle factors can significantly improve memory function. Regular physical exercise increases blood flow to the brain, while adequate sleep allows the brain to consolidate memories. Additionally, maintaining an active social life and continually challenging oneself intellectually appears to help people maintain sharp memories well into old age.

1. According to the passage, why do people often have clear memories of significant historical events?
 - A) Because they rehearse these memories frequently
 - B) Because strong emotions trigger memory formation
 - C) Because historical events are typically photographic in nature
 - D) Because they discuss these events with others

2. The passage suggests that eyewitness testimony can be unreliable because:
 - A) Witnesses intentionally deceive the court
 - B) Human memory is an active process that reconstructs experiences
 - C) Most people have poor photographic memory
 - D) Courtroom environments are too stressful

3. Based on the passage, which of the following is true about PTSD?

- A) It affects only people with poor memory
- B) It is characterized by an inability to form new memories
- C) It often involves intrusive memories related to trauma
- D) It can be quickly cured through modern medicine

4. What does the passage suggest about "photographic memory"?

- A) It is common among adults
- B) It is a skill that can be learned through training
- C) It is a myth with no scientific basis
- D) It is relatively common in children but rare in adults

5. According to the passage, memory is important because:

- | | |
|---|--|
| A) It allows us to deceive others effectively | B) It is crucial to our sense of identity |
| C) It helps us predict the future | D) It is necessary for physical coordination |
