Colony Collapse Disorder (CCD) is a situation that occurs when a majority of worker bees in a colony disappear and leave their queen behind. The use of pesticides is one of the main factors \_(16)\_ in CCD. Pesticides can cause worker bees to suffer brain damage. \_(17)\_ bees are unable to find food or return to their hive. Eventually, these bees die of starvation or pollute the whole hive. Reports \_(18)\_ that the total number of bees worldwide has been reduced by almost half by pesticides! Without bees, humans would find \_(19)\_ difficult to produce certain foods, such as vegetables and meat products. All in all, bees play a huge role \_(20)\_ maintaining the balance of our food chain. They truly deserve our protection.
